KEY-IN IGNITION OUTPUT: From software version 24.2, vehicle applications that show the 'Ignition' output highlighted in GREEN, now feature 'Key-In' sensing. The PURPLE wire 12v+ Igniton output will remain active for 30 minutes after the ignition is turned to the 'OFF' position and the key is left in the ignition barrel or slot. The output will terminate when the 30 minute timer expires or the key is removed from the Ignition. The 12v ignition output for vehicles listed without the green highlighting is active only with the vehicle ignition on.

Please note: Pre Installation Testing

Although most vehicle types will feature the functions shown above, some outputs may not be available to some vehicles due to variations in vehicle specification. It is advisable to connect the interface to power and CAN and then test the available output using the CANM8-TEST unit or an alternative test means, before making final installation connections.

Software Revisions:

The CANM8 application software is continually under development. As more vehicle applications are added to the software, revised Software Version Number is displayed on each interface. Vehicle compatibility can be checked by comparing the SWV number on the interface to those numbers displayed in the right most column of the table above. The CANM8 interface should be compatible with all vehicles showing SWV numbers equal to or less than the number displayed on the interface label.

FSD - R Front Parking Sensor Disable - Reverse Selected

This function is available with the products indicated above. The PINK wire can be used to provide a Ground (0v) connection to the front parking sensor system. When reverse gear is selected, the 0v output is terminated

FSD-PB Front Parking Sensor Disable - Park Brake On

This function is available with the products indicated above. When the vehicle parking brake is applied, the 12v+ output that powers the front sensor system is terminated. This feature is automatically detected from the CAN system.
